

Service Kits

All the items in our Service Kits are required to be changed each time our units are serviced, which should be done at least once a year. The following are the part codes you need to quote when ordering the service kits:

- **P50iVR-SERVICE** – This applies for both the **V Series** and **VR Series 26i/HD50i**
- **P70EVR-SERVICE** – This applies to both the **VM Series** and **VR Series HD70e**
- **P1200iKM-SERVICE** – This applies to both the **HDC1200 range** and **K26i**
- **P1500iKM-SERVICE** – This applies to the **HDC1500 range**

For details on what is included in the Service Kit, please see the listed pictures and descriptions below:

Electrode Kit

The electrode kit contents depend on which water heater you are working on. The **HD50i** and **HD70e** electrode kits consist of the following; **1x Electrode, 1x Flame Detection Probe** and **1x Electrode Gasket**. If you are working on a **HDC1200** or **HDC1500** water heater, you will receive the following in your electrode kit; **1x Electrode, 2x Flame Detection Probe** and **1x Electrode Gasket**.

Electrode Sleeve

The electrode sleeve is a little rubber boot that covers the connection for the electrode to be attached too. This boot is required for all units and is the same for each unit.

Water Inlet Filter

The water inlet filter is a small plastic filter which goes inside the cold water inlet connection underneath the unit. This filter fits the whole of the Rinnai UK water heater range.

Combustion Chamber Plate Packing

This packing is used on the combustion chamber plate. This gasket must always be present to prevent any gasses or heat exiting the combustion chamber.

Combustion Chamber Manifold Packing

This packing goes on the manifold plate at the front of the burner box. This gasket must always be present to prevent any gasses or heat exiting the combustion chamber.

Gas Valve O'Rings

Like the Electrode Kit, it depends on what unit you are working on as to how many **O'Rings** and how much **Gas Valve Packing** you will receive in each service kit. The **HD50i** and **HDC1200** units receive the same **O'Rings** and **Packing**; **1x O'Ring** and **2x Packing**. The **HD70e** and **HDC1500** units also receive the same as each other; **1x O'Ring** and **1x Packing**.

If you have any questions regarding our Service Kits, then please don't hesitate to contact Rinnai UK on 01928 531870, and we will do our best to help.
